

HEMANT GOUTAM

Frontend Developer

+91 8690845382 | hgoutam2001@gmail.com | [LinkedIn](#) | [GitHub](#)

Summary

Frontend Developer with 2 years of production experience building enterprise React.js and Next.js applications. Built real-time features using Server-Sent Events, secure JWT authentication flows, and reusable component systems that reduced feature development time by 30% and post-release defects by 25%. Strong command of TypeScript, state management (Redux, Zustand), modern UI libraries (MUI, Ant Design, Tailwind CSS), and performance/accessibility best practices.

Work Experience

Unthinkable Solutions (Daffodil Software)

Gurugram, Haryana

Jr. Associate Software Engineer | Sept 2024 - Present

- Developed and maintain 4+ internal enterprise applications using React.js, Next.js, and Material UI, building a reusable component library that reduced feature development time by 30%.
- Implemented real-time backend status tracking using Server-Sent Events (SSE), eliminating manual polling and improving visibility across 3+ production workflows.
- Built secure authentication flows with JWT and silent refresh-token handling, achieving seamless session persistence and reducing auth-related support tickets by 40%.
- Improved page load performance through code-splitting and lazy loading of route-level components, and used Lighthouse audits to track and improve Core Web Vitals across key application screens.
- Collaborated in agile, cross-functional teams with backend and QA engineers, improving development turnaround time and cutting post-release defects by 25%.

Professional Projects

Data Visualization Platform

Next.js, Plotly.js, JWT, REST APIs

- Built an interactive analytics dashboard using Plotly.js, enabling users to visualize large datasets through 10+ configurable chart types and dynamic tables, reducing manual reporting effort by 60%.
- Integrated JWT-based auth with silent refresh-token logic, ensuring zero-interruption sessions across page reloads for 100+ concurrent users.

Test Management System (TMS)

Next.js, TipTap, TypeScript, Analytics

- Built a full-featured TMS from scratch supporting test case creation, cycle management, and execution tracking for teams of 20+ QA engineers.
- Implemented analytics dashboards tracking test pass/fail rates, cycle completion, and defect trends across multiple projects in real time.

Policy Management System

React.js, TipTap, REST APIs, MUI

- Developed end-to-end policy and template creation workflows, enabling non-technical stakeholders to manage structured documents without engineering support.
- Built a rich text editor with inline commenting for collaborative review, plus version history with diff view to track and compare changes across document revisions.
- Established a persistent real-time connection to sync backend processing status live to the UI, improving perceived performance and eliminating 100% of manual polling.
- Built reusable form components with shared validation logic across 3+ modules, cutting implementation time for new policy types by 50%.

Technical Skills

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3

Frontend Frameworks/Libraries: React.js, Next.js

State Management: Redux, Zustand, Context API

Data Fetching & Caching: TanStack Query (React Query), REST APIs, Axios

UI Libraries: Material UI (MUI), Ant Design (AntD), Tailwind CSS

Build Tools: Webpack, Vite

Performance & Accessibility: Lighthouse, Core Web Vitals, Code-Splitting, Lazy Loading, a11y, WCAG

Tools: Git, GitHub, Bitbucket, VS Code, Postman, Vercel, Render

Education

Rajasthan Technical University

Nov 2021 - May 2025

B.Tech in Computer Science | CGPA: 8.0 / 10.0 | Kota, Rajasthan
